```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC factor 1 (CCF-1). The protein has antiparasitic, antibacterial and CC antinflammatory activity. Recombinant coelomic cytolytic factor 1 (CCF-1) is trypanolytic for the African trypanosome Trypanosoma brucei CC in a dose-dependent manner. The trypanolytic activity of rCCF-1 can be CC inhibited by anti-CCF-1 and anti-tumour necrosis factor (TMF)/TIP CC monoclonal antibodies. Furthermore, N,N'-diacetlychitobiose inhibits CCF indings that CCF-1 shares a trypanolytic, lectin-like domain with CCF indings that CCF-1 is useful to treat trypanosomal or bacterial infections CC or cancer. The proteins and peptides are also useful in tumour therapy, CC derived from a.42 kDa cytolytic protein named CCF-1 that binds cc derived from a.42 kDa cytolytic protein named CCF-1 that binds cc derived from a.42 kDa cytolytic protein named CCF-1 that binds cr useful and beta-1,3-glucan. The factor resembles the vertebrate tumour necrosis factor-alpha (TMF-alpha), and may be used as an alternative for TMF-alpha.
                                                                                                                                                                                                                                                                                                                             24

Its amino acid sequence was deduced from an isolated genomic DNA sequence (see AAW29457). Claimed DNA constructs that encode the novel BG (see also AAW29455), a mannose binding domain (see AAW29458) or a full-length enzyme, i.e. BG with mannose binding domain (see AAW29456), can be used to produce recombinant BG polypeptides, with or without a mannose binding domain, in fungal or bacterial host cells. BG polypeptides are used for the degradation or modification of beta-glucan containing material, especially for the gentle lysis of microbial cell walls, thereby enabling recovery of desirable intracellular products with a reduced amount of contaminants. They can also be used for the

This sequence comprises the polypeptide precursor of a novel oberskovia xanthineolytica enzyme that exhibits beta-1,3-glucanase (BG) activity and which includes a mannose binding domain (MBD). Its amino acid sequence was deduced from an isolated genomic DNA sequence (see AAT89156). Claimed DNA constructs that encode the novel BG lacking a MBD (see AAW29455 and AAW39457), a MBD (see AAW29455), or the fill-length enzyme can be used to produce recombina BG polypeptides, with or without a mannose binding domain, in fungal or bacterial host cells. BG polypeptides are used for the degradation or modification of beta-glucan containing material, especially for the gentle lysis of microbial cell walls, thereby enabling recovery of desirable intracellular products with a reduced amount of contaminants. They can also be used for the

BG polypeptides are used for the degradation or modification of beta-glucan containing material, especially for the gentle lysis of microbial cell walls, thereby enabling recovery of desirable intracellular products with a reduced amount of contaminants. They can also be used for the production of e.g. pigments, colourants, flavourants, yeast extracts, pharmaceuticals, food or feed compositions, and to prepare protoplasts for use in fusion, transformation and cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    enzyme that exhibits beta-1,3-glucanase (BG) activity. Its amino acid sequence was deduced from an isolated genomic DNA sequence (see AAT89155). Claimed DNA constructs that encode the novel BG also AAW29456 for corrected sequence), a mannose binding domain (AAW29458) or a full-length enzyme, i.e. BG with mannose binding

Partial amino acid sequence was used to generate PCR primers (AAT10280-1). These amplified a fragment of the gene used as a probe to obtain the full length gene (AAT10879) by screening a cDNA library derived from B.mori previously injected with heat Killed E.cloacae. The protein or fragments of it, can be used to treat diseases associated with LPS complexes e.g. septic shock, to remove the products used for injection and to protect transgenic plants

                                                                                       This is the amino acid sequence of the full length lipopolysaccharide (LPS) binding protein from Bombyx mori. The protein was isolated from the haemolymph of fifth stage B.mori larvae after injection with Enterobacter cloacae strain 57-9. Partial amino acid sequence was used to generate PCR primers (AAT10280-1). These amplified a fragment of the gene used as a probe to obtain the full length gene by screening a cDNA library derived from B.mori previously injected with heat-killed scloacae. The protein or fragments of it, can be used to treat diseases associated with LPS complexes e.g. septic shock, to remove LPS from products used for injection and to protect transgenic plants e.g. vines, tobacco, tomato or potato, against fungal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lipopolysaccharide binding protein; Bombyx mori; haemolymph; primer; Enterobacter cloacae; PCR; polymerase chain reaction; amplification; probe; LPS-complex; septic shock; injection; transgenic plant; vine; tobacco; tomato; potato; fungal infection; fungus.
                                                                                                                                                                                                                                                                                                     New protein from Bombyx mori that binds bacterial lipopoly-saccharide - esp. used to treat septic shock, also DNA encoding it, for producing transgenic plant(s) resistant to fungal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                      The new enzyme is derived from alkaoplhilic Bacillus Sp. The enzyme acts on beta-1,3-glucans to form glucose and laminaribiose. It is stable over a wide pH range with opt. activity at weakly actidic pH and has good heat resistance.
                                                                                                      Heat resistant beta-1,3-glucanase alkali-compatible Bacillus sp.
                                                                                                                                                                                                                                                                                                                   Alkalophilic;
                                                                                                                                                                                                                                                                                                                                         Beta-1,3-glucanase

Recombinant beta-1,3-glucanase can be produced on a large scale using transformed host cells, esp. Bacillus subtilis DN1885 or Toc46. Protease-free beta-1,3-glucanase can be obtd. that is useful for lysing fungal cell walls, allowing recovery of intracellular proteins. The enzyme is also useful for the prepn. of protoplasts and for the prodn. of pigments, colorants, flavours, yeast extract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proteins. SGTase protein has beta-1,3-glucanase activity. A large amount of SGTase can be prepared using the recombinant DNA.

               The present sequence represents the filamentous fungus Phaffia rhodozyma (CBS No. 6938) endo-1,3(4) beta-glucanase sequence. The enzyme may be used for modification or degradation of material which contains beta-glucan. Therefore the enzyme is claimed to be useful in, e.g. brewing, wine-making, preparation of protoplasts from yeasts, or preparation of pigments, colourants or flavourants. The enzyme is also claimed to be useful in the preparation of
                                                                                                                                                                                                              Claim 2; Pages 27-28; 36pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of hits satisfying chosen parameters:
